

Annual CCR Fugitive Dust Control Report

On December 3, 2025, a review of the CCR control measures was completed by a member of Corporate Environmental. This annual evaluation was conducted in accordance with 40 C.F.R. §257.80(c) and Section 3.2 of the CCR Fugitive Dust Plan (Plan).

Actions Taken to Control CCR

The methods used to control CCR fugitive dust at SGS are documented within the Plan. During the annual review, no significant concerns or deficiencies were identified for the methods in the Plan and their effectiveness in controlling CCR fugitive dust at SGS. Any incident involving dusting of CCR was recorded in an incident report as required by the Plan.

During the SGS site visit, which occurred October 28, 2025, all CCR management areas were noted to have no visible dusting. The roads used to transport CCR were clean and well maintained. CCR within the landfill was stored properly and cover material was properly placed to prevent dusting.

Citizen Complaints

No citizen complaints regarding CCR fugitive dust at SGS were received during the review period.

Summary

After reviewing the Plan and operations at SGS, it was determined no changes to the existing Plan are necessary.
